# **Unknown Chemical Interrogation Skills & HME Scenarios**

**Simple techniques are presented that both enhance safety but also assist in the identification of unknown chemicals and components especially when combined with FTIR and Raman spectroscopy.**

**They include:**

- Situational awareness**
- Resource management**
- Use of simple and attainable reference materials**
- Chemical analysis papers**

**The workshop concludes by incorporating all elements presented into four hands-on tabletop exercises. Participants must collectively work through each exercise and determine what chemical threats are present and what the end production goal or intent is (or was).**

**This half-day workshop provides participants with strategies and techniques to enhance safety and success in interrogating unknown chemicals with Raman and FTIR blended with other simple techniques.**

**This workshop is facilitated by HazardID.com subject matter experts with decades of combined education and experience identifying unknown hazards. The workshop is available both virtually and in-person.**

**For more information or to request a quote, either email your inquiry to [information@hazardid.com](mailto:information@hazardid.com) or visit [HazardID.com](http://HazardID.com).**
